ABSTRACTED-PUB-NO: JP 09267422A

BASIC-ABSTRACT:

The body (1) has a pair of resin layers (2A,2B) with different rates of heat expansion. Deformation displacement is done at the front and back sides by temperature variation. Reversible enantitropic is maintained at normal temperature, low temperature shrunk shape and high temperature swelled shape.

USE - In e.g. thermostatic switch, various industrial components.

ADVANTAGE - Enables easy tuning of colour variation. Formulates arbitrary shape of multilayered body.
